

# Global Vector Hub

The "go-to" place for vector research & control

The Global Vector Hub is the first of its kind. It is an open access, interactive resource that supports vector research and vector control programmes, as well as preparedness and responses to vector borne disease outbreaks.

The Hub is an exciting new platform for sharing data and information on vectors and diseases around the globe. It will build an interactive community where experiences and expertise can be shared, training gained and free online resources accessed.

It aims to support personnel, laboratories, field sites and control programmes around the world by providing:

- Vector and disease maps with epidemiological information for every country
- Evidence-based control recommendations and guidelines
- Open access data sharing platform
- Searchable databases of research labs and field sites globally
- Online network of discussion forums for vector researchers and controllers
- Open-access training resources on vector research and vector control

**The Global Vector Hub is designed for and owned by you – the vector community.**

LONDON
